SUMMARY

Software Development Engineer - Backend with production experience building Kotlin/JVM microservices for e-commerce buyer applications, checkout, subscriptions, feedback, delivery-charge rule handling, and order-management systems handling millions of orders. Strong in backend API design, service integrations, rule-driven fee calculation, GraphQL integrations, observability, safe rollouts, on-call debugging, and compatibility-sensitive data model changes.

SKILLS

Languages: Kotlin, Java, SQL, JavaScript, TypeScript, C++

Backend: Spring Boot, Dropwizard, REST APIs, GraphQL, Microservices, Feature Flags, CI/CD

Data/Tools: Azure Cosmos DB, MySQL, PostgreSQL, MongoDB, Azure Data Explorer, Git, GitHub, IntelliJ IDEA

Domains: Checkout, Cart, Subscriptions, Order Management, Marketplace, Rule Engines, On-call Debugging

EXPERIENCE

Udaan.com

Nov 2025 - Present

Software Development Engineer, Backend

- Shipped backend changes across 7+ Kotlin/JVM microservices covering checkout, cart, order lifecycle, constraint evaluation, feedback, and post-order flows handling millions of orders.
- Migrated checkout/cart fee calculation to typed, rule-backed charge flows supporting delivery, handling, platform, fuel surcharge, subscription, and buyer-level fee categories while preserving backward compatibility.
- Built WonderClub subscription/membership flows with renewal behavior, eligibility evaluation, minimum-order-value nudges, delivery-slot fee waivers, and configurable rule management.
- Delivered buyer feedback platform work for Home NPS, missing-usual, and shop-insights flows using reusable survey models, validation, persistence, observability, and experiment-gated rendering.
- Handled on-call debugging and production triage using GraphQL/order-read flows, logs, SQL, ADX traces, and telemetry checks across checkout, order, and post-order systems.

Udaan.com

Jan 2025 - Sep 2025

Software Development Engineer Intern, Backend

- Implemented day-level, delivery-slot, and order-level delivery charge algorithms with indexing and GraphQL-based data retrieval, reducing delivery charge escalations by 90%.
- Designed a strategy-pattern-based rule engine with 11+ parallel calculators for category-specific Minimum Order Value and delivery charge calculations.
- Built backend APIs and Azure Cosmos DB operations for 500+ configurable delivery charge rules used by internal rule-management workflows.
- Supported a React-based admin console with CRUD, CSV import/export, validation, staging, and feature-flag workflows for safe release of rule changes.

PROJECTS

Centralized Firewall - Smart India Hackathon 2023 Winner

Node.js, Express.js, React, MongoDB, Python, PyDivert, mitmproxy, eBPF

- Built a centralized firewall with allow/block rules, traffic monitoring, role-based access control, and packet filtering across Windows and Linux.

EDUCATION

M S Ramaiah Institute of Technology

2021 - 2025 | CGPA: 9.04

B.E. Computer Science Engineering and Cyber Security

ACHIEVEMENTS

- LeetCode rating 1840+; solved 700+ DSA problems across LeetCode, GeeksforGeeks, and Codeforces.
- Smart India Hackathon 2023 Winner for centralized firewall solution; finalist in Unisys Innovation Program.
